South Henry Regional Waste District
Town of Mays

PROJECT COMPLETION DATE

2003

Sanitary Sewer Expansion

Gravity Sewer Line

PROJECT DESCRIPTION

FPBH provided the design services for the South Henry Regional Waste District to expand their service territory to the Town of Mays in Northern Rush County when they requested connection due to failing septic systems.

The project was funded by USDA Rural Development and Build Indiana Grant.

The work included design of gravity sewers and lines in existing alleys and streets throughout the Town to a single pump station, and 4 miles of 6" force main along County Roads that connected to an existing 8" force main.

After design, FPBH assisted in obtaining permits from IDEM, INDOT, Rush County and Henry County, coordination with USDA representatives, project advertisement, letting, bid analysis and recommendation, all construction contract administration, and also provided full time construction inspection.
